Long Term Care Pharmacy

The framework within ePostRx™ gives the Client the flexibility to support pharmacy dispensing in a Long Term Care environment.

Features and Functionality

Cycle Fill Dispensing

- ❖ Create cycle dates for a facility and stations within a facility based on their needs
- ❖ Setup multiple facilities as "Care Facilities"
- ❖ Create unique inventory per facility and flag products
- ❖ Automatically process Refills

Cycle Dates

- ❖ Fill dates are created based on the needs of the facility as well as nursing stations within facilities
- ❖ Cycle dates can be set to run automatically or as a Single Cycle (off cycle) if needed
- ❖ Cycle fill dates are verified with dispensing facility schedules to alert the system administrator to any conflicts with weekends or holidays

Inventory Management

- ❖ Products files are setup per Facility
- ❖ Inventory is managed per facility

Facility Access

- ❖ Facility staff can easily access the system to place orders directly to the pharmacy and view order status at any time
- ❖ Secure setup allows data integrity while facilitating communications between the pharmacy and the facility
- ❖ Facilities have the ability to run real-time reports for census and medications lists
- ❖ Facilities have the access to refill prescriptions and enter new prescriptions the Facility Portal

Pharmacy Management System
Cycle Fill Pharmacy Solution

The Cycle Fill Solution is a fully configurable workflow that utilizes the processing power of the ePostRx®. This capability allows clients to process Cycle Fill according to business requirements, while utilizing the common features of processing and shipping prescriptions in a typical mail service environment.

In addition to the features and functionality listed the ePostRx™ application offers:

- A high volume, enterprise solution that supports most prescription dispensing business models

- Fully customizable workflow rules and corresponding queues

- Open Source architecture, giving customers more control over the application

- And more

Shipping Verification

- ❖ The audit functionality in the application alerts the user when all orders for a facility are processed and ready to ship via bar code scanning functionality
- ❖ For incomplete orders the user has the ability to see were in the workflow the missing orders are to be processed
